

Your fee-earners are already using ChatGPT. Client confidentiality doesn't survive the paste.

Sovara is a browser extension that checks every message and file against your firm's policy - **locally, before it's sent** - across ChatGPT, Claude, Gemini, Copilot and Perplexity. Client text never leaves the machine to be checked, and every decision lands in one audit trail.

~7 in 10¹

legal professionals now use generative AI for work - adoption more than doubled in a year.

46%²

of legal professionals use generic, consumer AI tools rather than legal-specific ones.

77%³

of employees using AI tools paste data into them - and 82% of pastes come from unmanaged personal accounts.

38%⁴

of employees admit sharing sensitive work information with AI tools without their employer's permission.

THE REGULATORY POSITION

SRA Code of Conduct 6.3 requires current and former clients' affairs to be kept confidential unless disclosure is required or permitted by law, or the client consents. Public AI chat needs controls wherever client-confidential or potentially privileged material could be pasted, uploaded, or copied into a prompt.⁵

Three verdicts, shown at the moment of send

- Block** A hard stop. The message is held in the composer and never sent.
- Warn** A nudge to reconsider. The fee-earner can justify and proceed - both are recorded.
- Redact** Sensitive content is masked with labelled placeholders before it can be sent.

The Legal preset, ready on day one

- Client and matter identifiers** - client names, matter numbers, claim numbers, court references.
- Privilege and sensitivity markers** - "privileged & confidential", "without prejudice", settlement drafts.
- Identity and financial data** - bank details, passport numbers, NI numbers, card numbers, email and phone.
- AI-use controls** - block restricted matters; warn or redact routine prompts before they leave the device.
- Your own rules** - client codenames, deal names, confidential terms lists, custom patterns.

PRIVACY-FIRST

Evaluated locally

The policy runs inside the extension. Client text is never transmitted for a check - only audit metadata syncs.

UNIFIED AUDIT

Defensible record

Every decision becomes an integrity-chained audit event - evidence for supervision, clients, and reviews.

FILES TOO

Uploads governed

File attachments and drag-and-drop are checked by file type and size before they reach the chat.

DEPLOYMENT

Managed rollout

Deploy via Intune, Group Policy, or Google Admin. Users can't override firm configuration.

Covers the sites your people actually use

ChatGPT Claude Gemini Copilot Perplexity

The extension governs browser-based AI chat. Site redesigns are handled centrally by publishing new selectors - no extension update, no gap in coverage.
